

Custom Sounds

Make Claude chime when it's done. Different sound for "waiting on your approval." Never miss a turn again.

What it does

Claude Code can run a shell command at specific events — like when it finishes a turn, or when it's waiting for you to approve a permission. You can wire those events to play macOS system sounds, so you know what's happening without watching the terminal.

Why it's fun

If you run long tasks, you can walk away and come back when you hear the chime. Different sounds for different events means you instantly know whether Claude finished — or is stuck waiting for you.

How to set it up

1. Open `~/claude/settings.json`
2. Add the `hooks` block below (merge with any existing `hooks` section)
3. Save. Next turn, you'll hear it

Copy-paste starter

```
{
  "hooks": {
    "Stop": [
      {
        "hooks": [
          {
            "type": "command",
            "command": "afplay /System/Library/Sounds/Glass.aiff"
          }
        ]
      }
    ],
    "Notification": [
      {
        "hooks": [
          {
            "type": "command",
            "command": "afplay /System/Library/Sounds/Submarine.aiff"
          }
        ]
      }
    ]
  }
}
```

Stop fires when Claude finishes a turn. **Notification** fires when Claude is idle or waiting for your input.

Built-in macOS sounds to pick from

All live in `/System/Library/Sounds/` — just swap the filename in the command:

Sound	Vibe
Glass.aiff	Clean bell — classic "done" sound
Submarine.aiff	Deep sonar ping — good for attention
Ping.aiff	Short, unobtrusive
Pop.aiff	Bubble pop — playful
Purr.aiff	Soft and warm
Sosumi.aiff	Quirky classic Mac sound
Tink.aiff	Light metallic — very quiet
Blow.aiff	Whoosh — surprising
Funk.aiff	Retro system chime

Preview any of them from Terminal: `afplay /System/Library/Sounds/Glass.aiff`

Fun ideas to try

- Different sounds for different events, so you hear without looking
- Use a long clip for big deploys: `afplay ~/Music/victory.mp3`
- Pair with a notification: add `osascript -e 'display notification "Done" with title "Claude"'` to the same hook
- Silent mode when you're in meetings: swap all sounds for empty strings

Heads up

Hooks run every time the event fires, including short turns. If you're in a rapid-fire back-and-forth, a loud sound every 20 seconds gets old fast. Pick quiet sounds (`Tink.aiff` , `Pop.aiff`) for frequent events, and save the dramatic ones for `Notification` .
